May 23<sup>rd</sup>

9:00 AM ET / 13:00 GMT

As renewable energy grows in scale, so do global public policy initiatives aimed at developing a full range of decarbonized power options:

- The state of California is set to be 100% carbon-free by 2045.
- Japan seeks to commercialize hydrogen power generation and international hydrogen supply chains.
- In Australia, commercial hydrogen power projects are already being developed.

So what does this mean for you? Join our webinar and live Q&A session with Dr. Jeffrey Goldmeer to learn about the use of hydrogen, and unlocking its potential so that it can be a reliable source of fuel going forward.

- **DISCOVER** the fundamental characteristics that make up hydrogen and see how it differs from methane.
- **LEARN** about the impact hydrogen has on power plant systems and how it's already being used today.
- **UNCOVER** new technologies that are quickly paving the way towards a carbon-free future.

## SPEAKER

### Dr. Jeffrey Goldmeer

Director, Gas Turbine  
Combustion & Fuel Solutions
